

Chicken Farms

Win-Win-Win situation:
1- Win for the surrounding
by removing bad odors
2- Win for the farmer:
Better chicken health, less
chicken death daily rate,
more transformation⁽¹⁾,
higher chicken delivery
weight and lesser need for
antibiotics and drugs.
3- Win for consumer:
better chicken taste

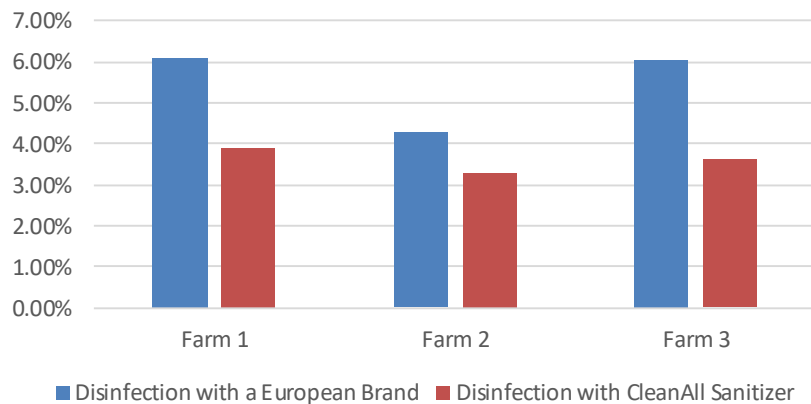

1% Dilution of our CleanAll Sanitizer will disinfect and remove odors from the worst organic waste in dumping sites, triage and recycling plants:

Add 1 litre of CleanAll Sanitizer to 99 litres of water to obtain 100 litres of spraying material enough to spray and disinfect a 1000 m² chicken farm⁽²⁾

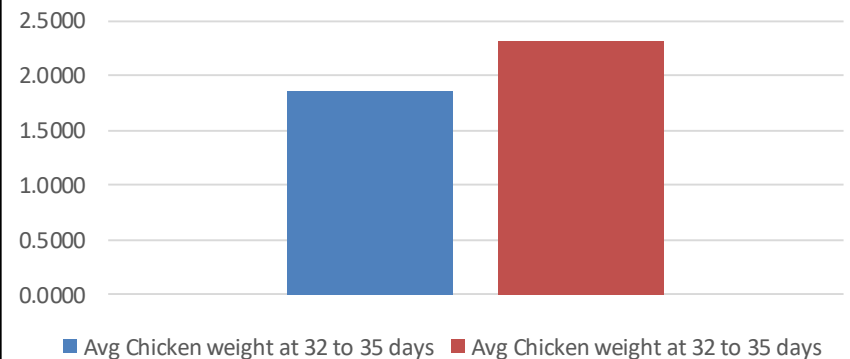

Chicken Farms

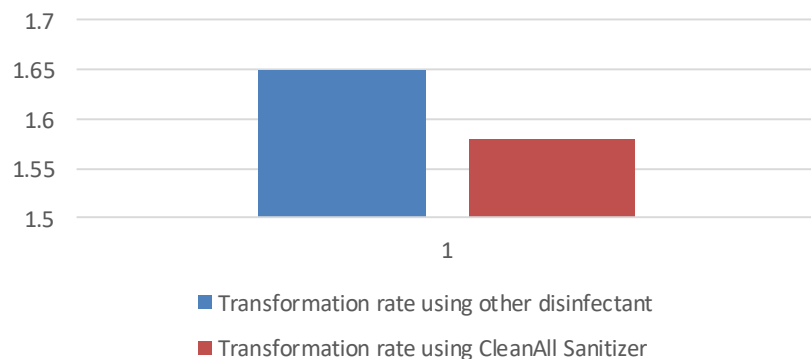

Decrease 25 to 40% in Chicken death rate

Increase 25% in Chicken weight at 32 to 35 days (in kg)

4 to 10 % amelioration in Transformation rate

Advantages on all fronts:

- Better Health for chicks:
 - 25 to 40% lesser death
 - 25% more weight
 - 4 to 10 better transformation
 - Eventually, lesser need for drugs, antibiotics

All in all healthier and better tasting chicken, with more profits for the Farm

Advantages of CleanAll Sanitizer in Chicken Farms

Healthier Chicken		CleanAll Sanitizer disinfects the Farms and thus Chicken would have a healthier environment, lesser bacteria, and a better health
No bad odors in and around Farm		Bad odors being the results of Bacteria living and multiplying on the farm surface full of chicken waste, lesser bacteria means lesser bad smells
Low Ammonia emission inside Farm		Ammonia emission being the result of bacterial growth, lesser bacteria means lower ammonia
Less death rate in Chicken		Healthier Chicken automatically translates into 25 to 40% lesser death rate, this means more chicken to sell at the end of the process
Better transformation rate		When the chicken is healthier, it will be lesser sick, so it will transform food in a better rate, into meat. A 4 to 10% increase in transformation rate would be noticed
Better Chicken weight		CleanAll Sanitizer provides 25% better weight, without the health compromise, this would be real meat, and not due to water retention
Better Chicken taste		Healthier chicken means lesser sickness, thus lesser drugs and antibiotics, thus better taste
Lower need for Drugs & Antibiotics		CleanAll Sanitizer disinfects the Farms and thus Chicken would be come lesser sick, so would need lesser Drugs and Antibiotics. This is also a financial advantage for the Farmer
Less infected Farm Surface		Farm Disinfection will lead to lesser epidemic crisis risks. Chicken will spend their time in a healthier environment, same as workers.
More meat in chicken		CleanAll sanitizer does not cause water retention, which would make chicken look bigger, but effectively with less meat. When heated, during cooking, water will evaporate, leaving less meat to eat, so most of the extra weight provided by water retention is water, not real meat. CleanAll Sanitizer provides 25% more meat in Chicken
Lesser water retention in Chicken		
Closer to be "organic" food		When chicken is healthier and is less in need for drugs and antibiotics, this means that we are getting real close to "organic" food

Note about Hormones use:

Although Hormones help the chicken stay alive in their last few days, but the growth effect they provide comes from water retention due to steroid effect. Upon heating of the chicken, it loses 30 to 40% of its weight due to water evaporation

There is no real comparison between Hormones use in Chicken Farms and CleanAll Sanitizer disinfection. These are two different techniques, one works on the water retention and anti-inflammatory effect, while the other (CleanAll Sanitizer) works on the environment surrounding the chicken, making it healthier, lesser contaminated, providing better health to chicken, lesser odors, increasing weight through better health and more meat, lesser death rate, etc ...
